

## PRESS RELEASE

Spånga, 13 September, 2022

### **Sainsbury's and Triboron will collaborate to evaluate Triboron Technology in Sainsbury's fuel**

**Triboron International AB (publ) ("Triboron") has signed a Memorandum of Understanding ("MoU") with Sainsbury's Ltd ("Sainsbury's"). The intention of the MoU is for the two companies to work together to develop options by treating fuels with Triboron Technology to reduce CO<sub>2</sub> emissions**

Sainsbury's is the second largest retail supplier of fuel to the UK market supplying volumes equivalent to the size of the entire Swedish market.

In 2021, Sainsbury's committed to reduce Scope 1 emissions by 30 percent by 2030, with a long-term commitment to be net zero by 2050 across its value chain. For Scopes 1 and 2, these include the reduction of greenhouse gas (GHG) emissions from their own operations.

The agreement stipulates an initial collaboration and validation period of six months, during which Triboron will supply additives to treat diesel fuel used by the Sainsbury's fleet of delivery and transport vehicles. The performance benefits sought by Sainsbury's may include lower fuel consumption for vehicles using the fuels allowing cost savings and scope 1 carbon emissions reduction for the Sainsbury's fleet as well as improve control of bacterial and fungal contamination in the fuel supply system.

"We see significant potential in the partnership with Sainsbury's and this could lead to further collaboration for reducing emissions" says Pär Krossling, CEO of Triboron.

The initial six months are going to be evaluated to determine Sainsbury's value of using Triboron's technology, after which a commercial agreement may follow.

"Climate targets matter – but action to deliver them matters more. We have a strong heritage in reducing our own emissions and are collaborating closely with our suppliers to ensure we're driving positive change across our value chain too. The progress we've made has enabled us to accelerate our own targets and move faster to cut our emissions. I am confident that our new agreement with Triboron will take us further along that road," adds Ben Meech, Technical Manager, Fuel and Renewables at Sainsbury's.

**About Triboron International AB (publ)**

Triboron is a Swedish Environmental Technology Company founded and managed by a group of leading Swedish industrialists. The company has a unique and patented technology developed to industrially integrate into fuels to a wide range of vehicles and machines. The technology reduces carbon dioxide emissions and provides significant financial savings. It also allows for increased use of biofuels.

**About Sainsbury's Ltd**

Founded in 1869, Sainsbury's is the second largest chain of supermarkets in the United Kingdom, with a 14.9% share of the supermarket sector. With brands such as Sainsbury's, Argos, Habitat, Tu, Nectar and Sainsbury's Bank, the Group has about 171,000 employees, over 1,400 outlets a turnover of nearly 30 billion GBP.
